Parag Modi

Full Stack Software Engineer | 5+ Years Experience | Python • FastAPI • Flask • Angular • React
paragmodi2601@gmail.com · 6261448319 · Ujjain, M.P., India · paragmodi26.github.io/myportfolio

PROFESSIONAL SUMMARY

Versatile Full Stack Software Engineer with 5+ years of experience designing, building, and deploying scalable web applications and APIs. Proven expertise in Python backend frameworks (FastAPI, Flask, Django) and modern frontend technologies (Angular, React). AWS Developer Associate certified with hands-on experience in cloud architecture, distributed systems, Elasticsearch, Celery, and PostgreSQL. Experienced across diverse domains including petroleum, media tech, HR tech, event ticketing, and SaaS platforms. Adept at leading cross-functional teams, managing end-to-end project delivery, and architecting enterprise-grade solutions for both product-based and service-based organizations.

TECHNICAL SKILLS

Backend	Python, FastAPI, Flask, Django, Celery, REST API Design, Java
Frontend	Angular, React, JavaScript, HTML5, CSS3, jQuery, AJAX, Bootstrap
Databases	PostgreSQL, MySQL, MongoDB, DynamoDB, DocumentDB, ElasticSearch, SQLAlchemy
Cloud / DevOps	AWS (Developer Associate Certified), Azure, Grafana, Git, GitHub
Tools	PyCharm, VS Code, Postman, PgAdmin, Selenium, Asana, Elastic Vue, Redis

PROFESSIONAL EXPERIENCE

Yash Technologies Pvt. Ltd.

Sr. Software Engineer — Jan 2025 – Present

▶ YCMS – Yash Competency Management System | Internal — Domain: HR Tech

FastAPI, Python, React, AWS, PostgreSQL, Redis, Celery, Ollama

- Led full-stack development of YCMS, an internal web platform for managing, tracking, and evaluating employee skills and competencies across the organization.
- Designed system architecture, implemented core features (skill mapping, competency assessments, reporting), and oversaw deployment pipeline.
- Integrated Ollama for AI-assisted competency analysis; leveraged Celery and Redis for async report generation and notification workflows.
- Collaborated directly with HR leadership and cross-functional teams to align platform capabilities with organizational goals.

▶ DataBridge | SLB (Schlumberger) — Domain: Petroleum Industry

Java, Python, Flask, FastAPI, Angular, Azure, Grafana, PostgreSQL

- Architected DataBridge, an enterprise data integration platform that acts as a bridge between ProSource (client proprietary DB) and DW (DataWorkspace), eliminating the need for manual data entry.
- Designed a dual-component system: an Extractor service deployed on client-side private infrastructure for secure data extraction from ProSource, and a cloud-based ingestion service for data transformation and loading into DW.
- Built an Angular UI enabling users to select data entities for ingestion, write and execute custom queries, configure bulk insertion operations, and manage ingestion schedules.
- Implemented a custom query builder allowing clients to extend and modify default extraction logic without requiring code changes or developer intervention.
- Set up real-time pipeline monitoring via Grafana, significantly reducing manual overhead and improving data visibility for the SLB petroleum operations team.

Thoughtwin

Software Engineer — Sep 2024 – Jan 2025

▶ TotalTicketing – White-label Event Ticketing Platform | China-based Client — Domain: Event Ticketing / E-Commerce

Python, FastAPI, PostgreSQL, React, Redis

- Developed a white-label online ticketing platform enabling clients to brand and operate their own event ticket-selling portal under their own identity.
- Built both box office (on-site) and online booking flows: admins can create and manage events, configure seating, and set pricing tiers; users can browse events and book tickets in real time.
- Implemented an admin panel for full event lifecycle management including seat configuration, pricing, capacity management, and booking analytics.
- Integrated online payment processing and implemented real-time seat availability tracking to prevent double bookings.

Frammer AI

Software Engineer Jun 2024 – Jul 2024

▶ FrammerAI – AI Video Processing Platform | Internal Product Domain: Media & AI

Python | FastAPI | Flask | AI/ML APIs | Cloud Storage

- Contributed to FrammerAI, a B2B SaaS product serving media companies and content creators, automating the end-to-end video repurposing workflow.
- Developed backend services for automated video processing: background noise removal, speech-to-text transcription generation, and intelligent video segmentation.
- Built pipelines to generate platform-optimized short-form clips (Instagram Reels, YouTube Shorts, Twitter/X) from long-form client video recordings automatically.
- Implemented automated content metadata generation including hashtags, hero/thumbnail images, video titles, and platform-specific descriptions to maximize content discoverability.
- Integrated direct publish functionality via OAuth, allowing users to upload processed videos directly to Instagram and YouTube on their behalf.
- Platform served multiple media company clients, enabling them to scale content production workflows without manual editing overhead.

Cubexo Software Solutions

Software Engineer Jul 2022 – Mar 2024

Associate Software Engineer Jul 2021 – Jun 2022

▶ Pulse Application | PeakXV Domain: SaaS / Data Platform

FastAPI | Python | React | AWS | Elasticsearch | PostgreSQL | DocumentDB | Redis | Celery | HTML | CSS

- Built a cloud-based data management web application using FastAPI for high-performance REST APIs, connecting PostgreSQL for structured relational data and AWS DocumentDB for flexible document storage.
- Integrated Elasticsearch to provide powerful full-text search and faceted filtering across large, multi-source datasets; optimized index mappings and query DSL for fast retrieval.
- Designed and implemented data ingestion pipelines connecting multiple external APIs and internal data sources into a unified schema.
- Developed Celery-based async task pipelines for scheduled data ingestion, processing, aggregation, and automated reporting workflows with Redis as broker.
- Built RESTful API endpoints consumed by the React frontend, supporting complex filtering, pagination, and data export capabilities.
- Responsible for database schema design, query optimization, and ensuring data reliability across PostgreSQL and DocumentDB layers.

▶ SwimTimes – Online Swim Lesson Booking Platform | US-based Client Domain: Ed-Tech / Booking

Django | Python | JavaScript | AJAX | AWS | PostgreSQL | Redis | Celery | Stripe

- Developed a full-featured online booking platform enabling users to book swimming lessons by selecting preferred times, locations, and instructors with real-time availability.
- Built dual dashboards: a user dashboard for managing bookings and tracking progress, and an instructor dashboard for schedule management, attendance tracking, and earnings overview.
- Integrated Stripe payment gateway for secure online transactions; implemented real-time seat availability updates using AJAX to prevent double bookings.
- Designed PostgreSQL database schema for user profiles, instructor profiles, booking records, lesson plans, and payment history; integrated AWS S3 for media storage and AWS for hosting.
- Implemented user authentication, role-based authorization, and email notification workflows for booking confirmations and reminders.

EDUCATION

B.Tech – Computer Science Engineering

2017 – 2021

AWARDS

🏆 Consultant of the Month — April 2022

Client Company

CERTIFICATIONS

- AWS Developer Associate — Amazon Web Services
- Foundation Programming in Django Web Application Development
- Certificate of Participation in Python Programming and Logic Development
- Foundation Programming in Java, HTML, CSS, JavaScript, MySQL
- Foundation Programming in C, C++
